Facial Adaptation uses a complete library of 39 different skin tone descriptors, including several new descriptors, to automatically correct skin tones in portraits. Touch-ups can be made later if necessary. In our time-poor society, that’s priceless advice. For his book, Kelby received no remuneration for any of his work, he explains, because he didn’t expect to make any money off the book. Adobe Sensei (AI) technology deepens the connection between Photoshop and the other Adobe creative technologies. For instance, Adobe Sensei technology expands what is available in creative workflows. By seeing all of the adjustments you make to an image, the app learns what to do next. This allows you to use one-click actions to remove unwanted objects, replace them with something new, or just pick an object of any type and only have Photoshop automatically follow that selection. This also applies to selections made in other creative applications, like Photoshop, InDesign, and Illustrator, or even mobile.
